The *Bibliography of Agriculture* is a monthly index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Magnetic tapes supplied by the Library are computer processed, using several vocabulary control mechanisms. The resulting subject and author indexes provide access to the literature in considerably less time than would be required by traditional indexing techniques.

INTRODUCTION

The *Bibliography of Agriculture* is a monthly index to the literature of agriculture and allied sciences, based upon the indexing records prepared by the U. S. National Agricultural Library, for its CAIN (Cataloging and Indexing) computer system. Macmillan Information prepares and publishes the Bibliography under the control of its own computer indexing system.

CONTENT

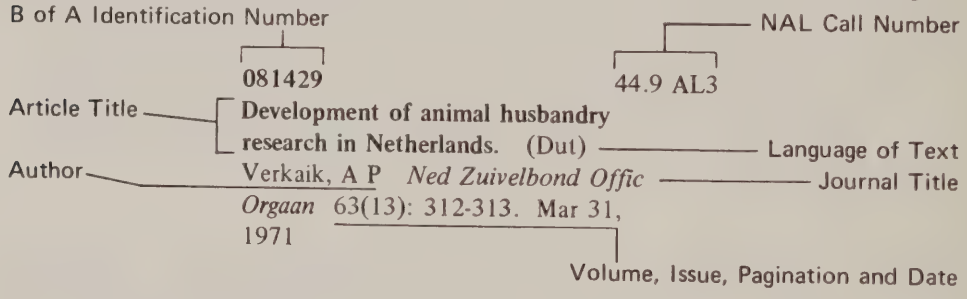
The National Agricultural Library collects literature related to agriculture from world wide sources. Publications are considered for inclusion in the CAIN System if a summary, abstract or title is available in a language in which the Library has expertise. The Bibliography includes journal articles, pamphlets, government documents, special reports, proceedings, etc. Books, new serials and other materials recently cataloged by the Library are announced in the *National Agricultural Library Catalog* published by Rowman and Littlefield.

Articles of substantial interest to the agricultural community are selected by specialists on the library staff. Editorials, letters to the editor, regular columns, and articles signed with pseudonyms or initials are not included. Indexing of articles on the processing of agricultural products is limited to those on primary processing. Generally material must have been published in the current year or the preceding year, but exceptions are made for comprehensive volumes or works of special significance to a wide audience.

The Bibliography is divided into four sections: A main entry section, a subject index, a corporate author index, and a personal author index.

MAIN ENTRY SECTION

The main entry section provides full bibliographic data for the records added to the CAIN system during the preceding month by the National Agricultural Library.



Entries are assigned to one (or more if appropriate) of the broad subject categories shown in the table of contents. The array of subject categories has been increased this year to facilitate browsing through a small number of citations of high relevance to a particular interest. Approximately equal numbers of citations will fall into each category over a given period of time. In assigning materials to the categories, first consideration is given to the aspect, discipline or methodology involved, so that the categories will enhance information given in the title.

Within each category, entries are arranged alphabetically by journal title abbreviation. This permits rapid locating and scanning of articles from journals which are known to be relevant.

Each entry begins with a six digit identification number assigned sequentially throughout a volume year. This number serves as an identifier for the item in the various indexes. The call number of the National Agricultural Library is also noted on the first line of each entry, and should be included in any correspondence with the library. All titles are in English, using the Library's translations of non-English titles as necessary. If the text is other than English, the original language is indicated in parentheses following the title, using the following notations:

(Afr)	Afrikaans	(Fle)	Flemish	(Lit)	Lithuanian
(Alb)	Albanian	(Fre)	French	(Mac)	Macedonian
(Arm)	Armenian	(Geo)	Georgian	(Nor)	Norwegian
(Aze)	Azerbaijani	(Ger)	German	(Pol)	Polish
(Bel)	Belorussian	(Gre)	Greek	(Por)	Portuguese
(Bul)	Bulgarian	(Heb)	Hebrew	(Rum)	Rumanian
(Bur)	Burmese	(Hun)	Hungarian	(Rus)	Russian
(Chi)	Chinese	(Ice)	Icelandic	(Ser)	Serbian
(Cro)	Croatian	(Ind)	Indonesian	(Slo)	Slovak
(Cze)	Czech	(Ita)	Italian	(Slv)	Slovenian
(Dan)	Danish	(Jap)	Japanese	(Spa)	Spanish
(Dut)	Dutch	(Kor)	Korean	(Swe)	Swedish
(Est)	Estonian	(Lat)	Latin	(Tha)	Thai
(Fin)	Finnish	(Lav)	Latvian	(Tur)	Turkish
				(Ukr)	Ukrainian

In order to identify bibliographic elements within each main entry, note the following:

SUBJECT INDEX

The subject index is designed to provide very specific access to the material in the main entry section. All entries are based on single words in the title (and title enrichment when added by the Library). An entry will be made whenever a title word matches a word on the authority file developed specifically for the Bibliography by CCM Information Corporation. The authority file reflects the most current terminology as it is used in the literature, and currently contains over 50,000 terms.

The entry may be made under a heading that is identical to the title word:

PROTEIN
Synthesis & **accumulation** of **protein**
High protein versus low **protein barley**

In some instances words which have the same meaning are grouped together under a single subject heading, effectively reducing the number of headings a user must consult.

BIRTH
Effect of restricted **feeding** since **birth**
primary enteritis of **newborn calves**
Perinatal mortality, especially in cattle

Cross references are printed in the index when entries are made under a synonym.

PERINATAL
SEE BIRTH

The title word on which the entry is based appears in bold face type to facilitate rapid scanning of the index. A secondary word which may either precede or follow the primary word also appears in bold face type. These word pairs can provide more rapid access to the desired citation by narrowing the subject.

WATER
of alga in some **brackish water** 088862

Water resources research in Minnesota 091217

Subject heading
Secondary word
B of A Identification Number

The bold face word pairs are augmented by including as many additional words of the title as possible within the width of the column. Some words are necessarily truncated, but truncation occurs only in the last word of the title segment.

The six digit identification number follows the citation and refers the user to the appropriate entry in the main entry section of the Bibliography.

AUTHOR INDEXES

All personal authors (to a maximum of ten for each citation) are included in the index. Entries are made by last name and initials, followed by the six digit identification number referring to the bibliographic data in the main entry section.

Author — Pierre JF 088862 — Bibliography of Agriculture Identification Number
Bay RR 091217

Corporate authors are entered in a separate index. The full corporate citation is given, followed by the six digit identification number referring to its appropriate main entry.

AVAILABILITY OF REFERENCES CITED
